

## NAM VIET OCCUPATIONAL SAFETY TRAINING AND ENVIRONMENTAL MONITORING CO., LTD.

Full name:

Year of birth:

Company:

Please circle one (01) correct answer.

**Question 1:** During the installation and connection of the air purifier system, what is the main cause of the risk of electric shock?

- a) Improper installation and maintenance of equipment
- b) Lack of personal protective equipment
- c) Failure to properly disconnect the power source when working with electronic components
- d) Workers are not trained in electronic connection techniques

**Question 2:** When checking and calibrating an air purifier, which of the following factors needs to be checked first to ensure the machine operates properly according to technical requirements?

- a) Machine noise
- b) Air flow
- c) Filtration efficiency
- d) Durability of components

**Question 3:** One of the most important measures to prevent occupational accidents when checking and calibrating air purifiers is

- a) Use maintenance-free testing equipment
- b) Not using personal protective equipment to increase comfort while working
- c) Disconnect the power before inspecting or maintaining the equipment.
- d) Increase working in narrow spaces to save time

**Question 4:** Which of the following is not a contributing factor to occupational accidents during the installation and connection of air purifier systems?

- a) Lack of regular maintenance of equipment
- b) Violation of testing and calibration procedures
- c) Work in a clean and tidy environment
- d) Improper working posture

**Question 5:** When an electrical work accident occurs during system installation and connection, the first thing to do is

- a) Continue working to complete the task
- b) Disconnect the power immediately

- c) Check electrical connections
- d) Report the problem to management without doing anything further

**Question 6:** During the process of checking and calibrating air purifiers, if proper measures are not taken to protect against dust and chemicals from the filter, what problems may workers encounter?

- a) Muscle problems
- b) Respiratory problems
- c) Bone and joint pain
- d) Mechanical trauma

**Question 7:** Which of the following factors is the main cause of cuts or scratches during air purifier inspection and calibration?

- a) Lack of protection for electronic components
- b) Using inappropriate or improperly maintained tools and equipment
- c) Working in narrow spaces
- d) Lack of attention to thorough testing techniques

**Question 8:** One of the important requirements in the occupational safety procedure when checking and calibrating air purifiers is

- a) Workers do not need to use protective gloves if working with large machine parts.
- b) Periodic measuring and testing equipment is required to ensure safety.
- c) Ensure there is adequate ventilation in the work area to prevent dust from escaping.
- d) No need to report incidents after each inspection

**Question 9:** During the inspection and calibration process, occupational accidents can occur when workers work with damaged electronic components. The main causes of these accidents are

- a) Lack of training on how to handle electronic equipment
- b) Failure to perform periodic inspection of electronic components
- c) Errors in the inspection process of mechanical components
- d) Using the wrong type of tool

**Question 10:** When a work accident occurs, what should employees working at the scene do to ensure safety and serve the investigation later?

- a) Prepare a detailed accident report and record all events.
- b) Continue working without reporting the incident
